### Deep Learning Made Easy With

I have just finished reading "Deep learning made easy with R" and I polished it off over a weekend. It had a good pace, there were plenty of examples and a sufficient technical description to give a good grounding from which to launch into more formal texts. I definitely feel equipped to use some of the techniques in my own research work.

TensorFlow has a Python API which is not that hard, but Keras made really easy to get into Deep Learning for lots of people. It should be noted that Keras is now officially a part of Tensorflow: [www.tensorflow.org/api\\_docs/python/tf/contrib/keras](http://www.tensorflow.org/api_docs/python/tf/contrib/keras) . Deep Learning Frameworks I made a comparison between Deep Learning frameworks.

Deep learning is powerful exactly because it makes hard things easy. The reason deep learning made such a splash is the very fact that it allows us to phrase several previously impossible learning problems as empirical loss minimisation via gradient descent, a conceptually super simple thing.

Deep Learning rose out as a subfield to Machine Learning. While Machine Learning is a way to achieve AI, Deep Learning is a way to implement Machine Learning given data of many dimensions. Similar to the biology of our human brains, we put data, "input", through multiple "neural networks," in "neural layers," and get "output."
